Two-Factor Authentication

Two-factor authentication can be enforced for all users and specific groups. If they do not have a two-factor provider configured, they will be unable to log into the system.

☐ Enforce two-factor authentication

Server-side encryption *i*

Server-side encryption makes it possible to encrypt files which are uploaded to this server. This comes with limitations like a performance penalty, so enable this only if needed.

☐ Enable server-side encryption

Two-Factor Authentication

Two-factor authentication can be enforced for all users and specific groups. If they do not have a two-factor provider configured, they will be unable to log into the system.

☒ Enforce two-factor authentication

Limit to groups

Enforcement of two-factor authentication can be set for certain groups only.

Two-factor authentication is enforced for all members of the following groups.

Enforced groups

Two-factor authentication is not enforced for members of the following groups.

Excluded groups

When groups are selected/excluded, they use the following logic to determine if a user has 2FA enforced: If no groups are selected, 2FA is enabled for everyone except members of the excluded groups. If groups are selected, 2FA is enabled for all members of these. If a user is both in a selected and excluded group, the selected takes precedence and 2FA is enforced.

Other login ways

The image shows a login interface on a blue background with a subtle pattern of small white dots. At the top center is a white logo consisting of three overlapping circles. Below the logo are two white input fields: the first is labeled 'Username or email' and the second is labeled 'Password'. Below these fields is a white rounded button with the text 'Log in' and a right-pointing arrow. Underneath the button is a link that says 'Forgot password?'. At the bottom, there are six colored rounded buttons for social media login, each with an icon and the text 'Log in with [platform]': Google (red), Amazon (orange), Facebook (dark blue), Twitter (light blue), GitHub (dark grey), and Discord (purple).

The screenshot displays the ONLYOFFICE Online Editors web application. The interface includes a top blue header with the ONLYOFFICE logo and a navigation bar with tabs: File, Home, Insert, Layout, References, Collaboration, and Plugins. The document title 'Sample Document.docx' is shown in the top right. Below the navigation bar is a ribbon with various editing tools. The main editing area shows a document with a blue geometric pattern header and the text 'Welcome to ONLYOFFICE Online Editors'. The text is in a large, bold, blue font. Below this, there is a paragraph: 'We are proud to present the first **HTML5** Canvas-based online document editors.' followed by another paragraph: 'ONLYOFFICE Online Editors can be easily integrated into your website or cloud application via API provided. Thus you get a chance to provide users with the most advanced online document editors for text docs, spreadsheets and presentations.' The right sidebar contains formatting options for Line Spacing (Multiple, 1.15) and Paragraph Spacing (Before: 0.27 cm, After: 0.6 cm). The bottom status bar shows 'Page 1 of 1', 'All changes saved', 'English (United States)', and 'Zoom 100%'.

The image shows the PHP logo, which consists of the letters 'php' in a bold, italicized, black sans-serif font. The letters are outlined in white and are set against a blue oval background. The 'p' is lowercase, while the 'h' and 'p' are lowercase as well, though the first 'p' is often stylized to look like a capital in some contexts. The logo is partially cut off on the right side.
